

SELF-PROPELLED DUMP TRAILER

AXIS *Since 1958*
CORPORATION

1-800-422-AXIS

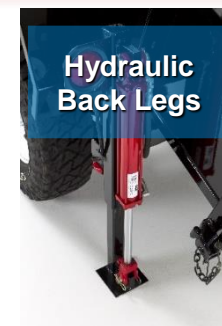

- It is self-propelled, so it will go where a truck cannot
 - It can be propelled directly to the work site eliminating lifting and carrying, or using wheel barrows
 - Move it around the building when taking off roofing shingles, instead of workers moving around the roof, which is time-consuming and dangerous
 - It has two hydraulic cylinders in the back for leveling on hills, or uneven ground, and prevents trailer from being stuck in the mud
 - No need to dump mulch, or transport it in wheel barrows—transport it directly to the work site for dumping
- Saves time and labor
 - Will not track up the lawn
 - Easily fits into backyards

FEATURES & OPTIONS
