SELF-PROPELLED DUMP TRAILER

Advantages Over Conventional Dump Trailers

AXIS SELF-PROPELLED DUMP TRAILER

CONVENTIONAL DUMP TRAILER

Since the Axis Dump Trailer is self-propelled, you simply unhitch it from your truck, and GO!! It goes where your truck cannot; WITHOUT TRACKING UP THE GRASS!

Conventional dump trailers are downright inconvenient. You cannot move them at all without a truck to pull them—and backing them up is always cumbersome.

With the self-propelled dump trailer, you can take your mulch directly to the work site and dump it where it needs to be placed.

Using a conventional dump trailer, mulch is either dumped in a pile or is transferred from the trailer to a wheelbarrow, which is time consuming and labor intensive!

Easy to hitch—simply self propel the trailer to the truck hitch.

Backing up to a conventional dump trailer to hitch it, is not only difficult, it is time-consuming and the risk of damaging your truck, or the trailer, is always possible.

Easy dumping—self-propel to the dump site and easily dump your load.

With a conventional dump trailer, you have to back it up with your truck to dump your load.; and many times you need another person to direct you—very inconvenient!

Cylinders raise independently of each other—therefore, you can stabilize the trailer on uneven ground.

Hydraulic cylinders to keep the trailer from getting stuck, as well as for stabilizing and leveling on uneven ground.

With conventional dump trailers, if you have to go through mud, your truck has to come with you. What happens if both get stuck, or you need to load/dump on uneven ground?

Use the dump trailer for roofing jobs—moving the trailer around the structure, as you deposit old shingles.

With a stationary dump trailer, more time and labor are required to walk around the roof to deposit the shingles—and it is dangerous!!

You can carry & transport your sod in the Axis Self-Propelled dump trailer while laying it.

Without a self-propelled dump trailer, you will have to carry the sod to where it is to be placed. More time and labor!

No blowing leaves long distances—just move the self-propelled dump trailer with you, as you rake, (or blow) the leaves onto a tarp, and dump them in the trailer.

Why pay for, and use more labor, when it is not necessary?

If you need to dig a hole where there is grass, you can deposit the dirt into the dump trailer and dump it to back fill.

Without a self-propelled dump trailer, you have to leave the dirt in a pile on the grass and back fill later.

Unlike regular dump trailers, the Axis trailer will fit into back yards to use for hardscaping jobs.

Also great for gravel, stones, pavers, etc.

SAVE TIME, MONEY AND LABOR BY USING THE AXIS SELF-PROPELLED DUMP TRAILER!! IT IS DURABLE, CONVENIENT AND EFFICIENT!
